

AWPM for Wheat

The main goal of AWPM for Wheat is to collaborate with wheat producers in evaluating and demonstrating non-chemical pest management techniques, with particular emphasis on the management of the Russian wheat aphid and the greenbug.

Our demonstration elements include identifying pests and beneficial insects, scouting and biocontrol, crop diversification, host plant resistance, and other best management techniques.

Our project is a collaborative effort, teaming the USDA Agricultural Research Service with growers and universities in Texas, Oklahoma, Kansas, Colorado, Nebraska and Wyoming.
